

# July checkpoint Jet validation

Christian Kirfel

10th September 2020

# Intro

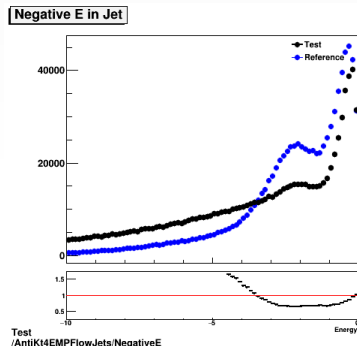

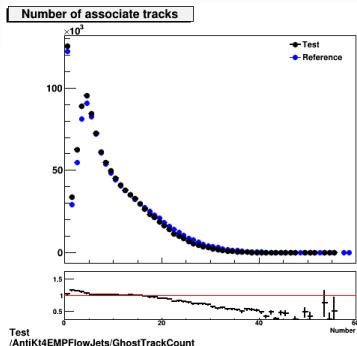

- [Jira Ticket](#)
- Three main comparisons:
  - ① r22 with default cuts versus r21
  - ② r22 with default cuts versus r22 cutLevel=16
  - ③ r22 versus 21, both with preExec for switching off the thresholds applied to the calibrated jet pt
- Red plots detected in all samples and comparisons
- For all plots and additional ttbar comparisons see: [WEBPAGE](#) (naming convention on next slide)

# Webpage naming convetion

task<sub>x\_yz\_tag</sub>

- 1: without preExec for switching off the thresholds applied to the calibrated jet pt, both for r22 and r21
- 2: with preExec for switching off the thresholds applied to the calibrated jet pt, both for r22 and r21
- 1: without pile-up
- 2: with pile-up
- 1: r21
- 2: r22 cutLevel=16
- none: 361023
- \_ttbar: 410000, \_ratio: using a ratorange of 0.25

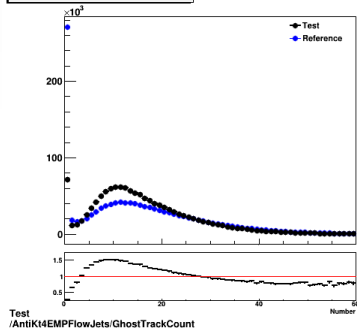

# Task1\_11 r22 default vs r21 w/o pile-up

- Red plots in all samples, mostly tracking related
- EMPFlow: tracking related, NegativeE, track width
- EMTopo: tracking related, NegativeE
- LCTopo: tracking related, NegativeE

# Task1\_21 r22 default vs r21 with pile-up

Number of associate tracks

Negative E in Jet

- More than 50% red plots in all samples
- better agreement can be seen at high pT

# Task1\_12 r22 default vs r22 cutLevel=16 w/o pile-up

**Number of associate tracks****Jet Vertex Fraction**

- 3 red plots for all samples
- Red plots: JVF, JVF at index 0, number of associated tracks

# Task1\_22 r22 default vs r22 cutLevel=16 with pile-up

Number of associate tracks

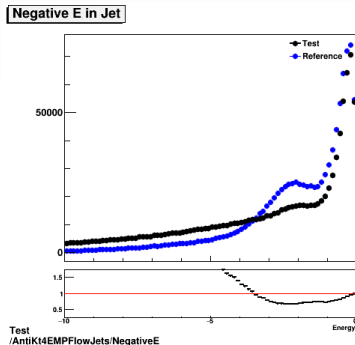

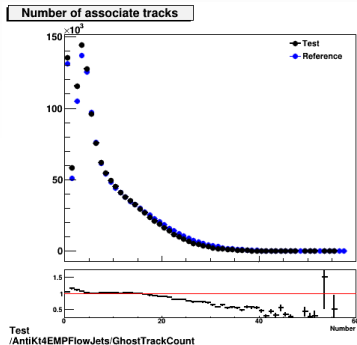

Jet Vertex Fraction

- 3 red plots in all samples: JVF, JVF at index 0, number of associated tracks
- Other than in task1\_12 several plots are yellow, partially overlapping with task1\_21 yellow plots

# Task2\_11 r22 vs r21 w/o pile-up, both with preExec

- Red plots in tracking variables as for task1\_11
- Additional/different yellow plots compared to task1\_11, for example LArQuality

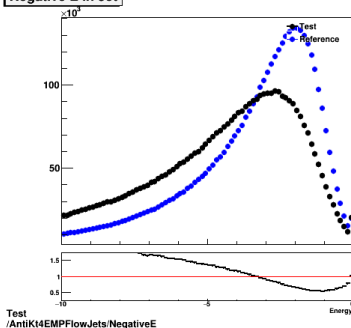

# Task2\_21 r22 vs r21 with pile-up, both with preExec

Number of associate tracks

Negative E in Jet

- Generally less red plots than for task1\_21 without preExec
- Color summary on next slide

## Color summary for Task2\_21 r22 vs r21

		2_21			1_21	
Sample	PFlow	EMTopo	LCTopo	PFlow	EMTopo	LCTopo
Red	32	28	33	53	47	52
Yellow	22	24	19	13	18	14
Green	33	37	37	20	21	20

- Plots that are yellow (instead of red) in task2\_21 are mainly: jet  $\eta$  (constit and EMScale), energy in EMB2/EME2/EME3/FCAL1/FCAL0/HEC2/HEC3, HEC fraction, high pT variables, number of associated muon fragments

# Conclusion

---

- Red plots for all samples and comparisons still.
- If you want to see more plots in detail or any other specific comparisons please message me!
